Introduction

I am an Artificial Intelligence graduate from VNU-HCM University of Information Technology, where I **graduated earlier than expected as the Valedictorian of the program**. I have a strong passion for Data Science and Machine Learning, with hands-on experience in Multimodal Learning, Deep Learning, and NLP through academic projects and competitions. I enjoy building real-world AI applications and continually expanding my technical skills through open-source work and research.

Education

BS **VNU-HCM University of Information Technology**, Artificial Intelligence — Sep 2022 – now

- **GPA:** 9.1 or 4.0 *(Valedictorian)*
- **Coursework:** Machine Learning with Python, Advanced Artificial Intelligence, Deep Learning and Applications

Certifications

IELTS Academic — *IELTS Test Report Form*

- Overall: 7.0 (Listening: 7.0, Reading: 7.5, Writing: 6.5, Speaking:6.5)

Experience

XBStation, AI Engineer Intern — Aug 2025 - Oct 2025

- Researched niche open-source field in Edge AI, expanding domain expertise.
- Optimized deep learning models for real-time drone deployment under resource constraints.
- Deployed models on diverse edge hardware (OAK-D S2, Radax CM5, Qualcomm-based carrier boards).
- Applied model compression techniques - distillation, pruning, quantization - to improve efficiency.

Projects

Multimodal Sarcasm Detection on Vietnamese Social Media Texts — *github.com/l1aF-2027/UIT-Data-Science-Challenge-2024*

- DSC-UIT 2024 Competition – **2nd Prize Winner**
- Developed a multimodal sarcasm detection system that integrates captions, images, and OCR-extracted text, achieving an F1-macro score of 0.45 on the private dataset and 0.44 on the public dataset.
- Tools Used: Python, Keras, OCR, Transformers, Streamlit

SpecAugment with NeMo on Vietnamese and English — *github.com/l1aF-2027/SpecAugment-with-NeMo-on-Vietnamese-and-English*

- Applied SpecAugment to enhance speech recognition by fine-tuning QuartzNet and Hybrid RNN-T models on Vietnamese and English datasets using NVIDIA NeMo, achieving WER of 0.2310 on VIVOS Corpus and 0.15 on LibriSpeech-100.
- Tools Used: Python, PyTorch, NVIDIA NeMo

UIT Admissions Chatbot *github.com/l1aF-2027/UIT-Admissions-Chatbot*

- Built a web-based chatbot using NLP to answer UIT admissions FAQs, combining rule-based and intent-based models.
- Tools Used: Python, FastAPI, React, Next.js, TailwindCSS, Transformers

Technologies

Languages: Python, TypeScript, SQL, CSS, HTML

Frameworks & Tools: PyTorch, Tensorflow, FastAPI, Next.js, Tailwind CSS, CUDA, PowerBI, VIM, Git
